JOSE ALEJANDRO REALZA

CLOUD SOLUTIONS ARCHITECT

SOFTWARE & AUTOMATION DEVELOPER

Full Stack Developer Engineer | Team Leader : **2021 - NOW**

devbase.us

- **Acting** as a leader, coordinating development tasks and organizing integration testing with the QA team using Postman, as well as end-to-end testing for critical business flow scenarios.
- **Developing** microservices using Node.js and JavaScript, following SOLID principles and design patterns to optimize software architecture and enhance scalability.
- **Leading** the migration of legacy monolithic architectures to microservice-based and serverless architectures, utilizing a hexagonal approach that increased system modularity.
- **Implementing** automated tests with Jest and Selenium, achieving a 40% reduction in production errors.
- **Automating** quality and testing processes using tools like Postman, resulting in a 25% improvement in development cycle efficiency.

Technologies : NodeJS, Typescript, Express, NextJS, React, AWS Lambda, SQS, Jest, Selenium, Postman, Git, Docker

Full Stack Developer Engineer: **2019 - 2021**

playtika.com

- **Applied** a design-driven development model in the user transactions module of the payment and rewards system, utilizing Java, Spring, and Kafka to enhance system performance and reliability.
- **Implemented** new communication bridges from various clients to the backend of the business model using Node.js and Socket.io, improving data exchange and real-time interactions.
- **Added** new functionalities to the platform's back office, used for managing users and digital products, using PHP, Backbone, and jQuery to streamline administrative operations.
- **Migrated** the legacy back office in stages to a modern client-side application, leveraging Node.js, Express, and React for a more responsive and user-friendly experience.

Technologies : PHP, Java, Spring, NodeJS, Express, Socket.io, Rabbit, Kafka, Backbone, jQuery, Jest, Postman, Git

Backend Developer Engineer: **2017 - 2019**

bairesdev.com

- **Added** new payment methods to the payment gateway for the ***ClaroVideo*** and ***ClaroMusica*** products through Mastercard's web services, using Node.js, Express, and RabbitMQ to enhance transaction processing.
- **Implemented** a new business logic to enable "*upsell*" and "*downsell*" concepts for user subscriptions, utilizing PHP, Laravel, Zend Framework, and RabbitMQ to streamline subscription management.
- **Applied** unit and integration testing to the project to reduce inconsistencies and identify failures in the business logic throughout its lifecycle, using Jest, Prophecy, and Postman

Technologies : PHP, Laravel, Zend Framework, NodeJS, Express, Rabbit, Jest, Postman, Git, Docker

Fullstack Developer Engineer: **2012 - 2017**
